

The seven primer conditions

each one's sentence about node 2

none

(no primer)

components

This graph has 1 connected component.

degree ★

Node 2 has degree 3.

clustering

Node 2 has clustering coefficient 0.33.

rwse

Node 2 has return probability 0.50 after 2 steps and 0.17 after 3 steps.

all ★

   degree, clustering and RWSE in one sentence

filler

Node 2 is simply present within the graph G.

★ states the answer to a node-degree question

The prompt the model reads

PRIMER • one of the seven (here: degree)

Node 0 has degree 2. Node 1 has degree 2. Node 2 has degree 3. Node 3 has degree 2. Node 4 has degree 1.

GRAPH • incident encoding

G describes a graph among nodes 0, 1, 2, 3, and 4. In this graph:

Node 0 is connected to nodes 1, 2.

Node 1 is connected to nodes 0, 2.

Node 2 is connected to nodes 0, 1, 3.

Node 3 is connected to nodes 2, 4.

Node 4 is connected to node 3.

QUESTION • one of six tasks

Q: What is the degree of node 2?

A:

The same graph and question under all seven conditions, so every comparison is paired.
